## System 6: Non-Opening Folder May Be a Memory Problem 2/93

Article Created: 13 August 1991

Article Change History

-----  
02/02/93 - REVISED

- To indicate that this is valid for System 6 only.

TOPIC -----

Is there a limit to the number of files that can be placed in a folder? I have over 1,000 files in a Data Club network folder, and it will no longer open.

DISCUSSION -----

The maximum number of files and folders available on a hard drive is roughly limited to about 4.3 billion total, with a 64,000 file limit. If you're having a problem opening the files, it may be related to Finder memory allocation instead.

Do this:

- 1) Do Get Info on the Finder. (In the Finder, select the Finder file, then choose Get Info from the File menu.)
  - 2) Increase the Application Memory Size by 100K.
  - 3) If that doesn't work, increase the memory allocation by another 100K.
