System Software Version and NSI Compatibility (6/93)

Article Created: 15 June 1993

```
TOPIC -------------------------------------------------------------

I can't find anything that says it's okay to install new versions of
AppleTalk of machines running older systems.  Everything I've found vaguely
implies that it's okay by saying "Apple recommends using the latest version
supplied on Network Software Installer (NSI) version (whatever)".

Are there minimum system requirements for NSI 1.2.3, 1.3, or 1.3.2?

DISCUSSION --------------------------------------------------------

Apple currently supports using the N.S.I (all versions of the N.S.I.
through 1.3.2.) on Macintosh Operating System versions 6.0.5 and higher.
Using N.S.I. to update network components on versions of the operating
system previous to 6.0.5 is not supported by Apple.
