Easy Access: Saving Settings Between Restarts (1/95)

Article Created: 13 September 1993

Article Reviewed/Updated: 3 January 1995

TOPIC -----

I need a way to get the Easy Access settings to persist between restarts.

I use a headset to navigate on the Macintosh. I use Easy Access and would like a way for it to automatically be active when I start up the Macintosh. Currently, I have to press the shift key 5 times in succession, or open the control panel and manually select "On" each time I starts the Macintosh to activate Easy Access.

Are you aware of any way to have the Easy Access setting stay on between restarts?

DISCUSSION -----

This was fixed with System Update 3.0. Below is the section on Easy Access from it's Read Me file.

Updates the Easy Access control panel to version 7.2. This new version allows Sticky Keys to remain active after waking up if it was active when the PowerBook or Portable went to sleep. Also, Easy Access now remembers whether sticky keys, mouse keys, and slow keys were on or off between restarts.

Article Change History:

03 Jan 1995 - Changed article to show fix with System Update 3.0.
