AV Serial Extension: Fixes 660AV Serial Printing Problems (1/94)

Article Created: 17 January 1994

TOPIC-----

I'm using a 660AV with a LaserWriter Select 310 and a Geoport. The printer does not work. It works with any non-AV Macintosh, but when connected to any AV Macintosh it does not work.

DISCUSSION -----

The extension to fix the 660AV serial printing problems (AV Serial Extension) has been released for everyone. It is the official tested solution and can be given to people for 660AV/serial connection problems, especially LaserWriter Select 310 printing problems.

I have tested with this extension, and a document which consistently failed when printed to a LaserWriter Select 310 from the 660AV, now prints completely with no problem. I tested with:

- Virtual Memory and Voice Recognition both OFF
- Voice Recognition ON
- Virtual Memory and Voice Recognition both ON In all three cases the 660AV printed with no problem from the Printer Port.

The extension "AV Serial Extension (1.0)" is available on AppleLink via the path:

Support
 Apple Products
 Apple SW Updates
 Macintosh
 Supplemental System Software
