Language Kits: Updates for System 7.5.x Compat. (12/96)

```
Article Created: 27 May 1994
Article Reviewed/Updated: 10 December 1996

TOPIC -------------------------------------------------------------

Is either the Chinese Language Kit (CLK) 1.0 or 1.1, or the Japanese Language
Kit (JLK) 1.0 or 1.1 compatible with either System 7.5.x, or QuickDraw GX?

DISCUSSION --------------------------------------------------------

Yes, an updater for the Chinese Language Kit and a new version of the Japanese
Language Kit are now available and provide compatibility for the Language Kits
with System 7.5.x and QuickDraw GX.

The Chinese Language Kit Updater Version 1.0 was released November 27, 1994 and
updates the Chinese Language Kit to version 1.1.1. This update is available from
online services.

Japanese Language Kit Updater for System 7.5.1 includes four updated extensions
and provides compatibility with System 7.5.x. This update is available online.

The Japanese Language Kit 1.2 was released provides compatibility with System
7.5.x, QuickDraw GX compatibility for Japanese fonts, keyboard labels with Kana
characters, and a TrueType version of the Osaka font. The entire kit is
available from AsiaSoft, Inc. If you need to update from a previous version of
the Japanese Language Kit, contact the Apple Order Center.

The Tech Info Library article titled "Locating Vendor Information" can help you
search for a particular vendor's address and phone number.

If you already own Japanese Language Kit 1.0 or 1.1, you can purchase the
Japanese Language Kit 1.2 updater for $39 plus tax and shipping and handling
fees by calling the Apple Order Center. Both products are also available in
other countries.  For information on availability, contact the Apple office in
your country.

About the Chinese Language Kit Updater Disk

Installation

If you have installed System 7.5 and the Chinese Language Kit on your computer,
you need to use the Updater program on this disk. Do not use the Updater if you
are not running System 7.5.

IMPORTANT

Use the Updater program after you have installed the Chinese Language Kit
software. If you have installed only one version of Chinese (Simplified or
Traditional) and later decide to install the other version, you must use the
Updater program again after installing the other version.

System Requirements

To install the Chinese Language Kit and the software on this Updater disk, you
need the following:

• Macintosh system software version 7.5.

• A hard disk with at least 22 megabytes (MB) of disk space available if
  you want to install both Simplified and Traditional Chinese and their
  TrueType fonts (You need only 8 MB if you are installing only Simplified
  Chinese and its TrueType fonts, or 15 MB if you are installing only
  Traditional Chinese and its TrueType fonts).

• At least 16 MB of random-access memory (RAM) if you are using QuickDraw
  GX and/or PowerTalk along with the Chinese Language Kit; 8 MB of RAM if
  you are not using QuickDraw GX or PowerTalk.

Where to Find the Update

These articles can help you locate the Chinese Language Kit Updater mentioned
here:

• Where To Find Apple Software Updates
  Lists online services for "free" Apple software updates.

• Obtaining Apple Product Support in the USA

Lists 800 numbers and online services for software updates, Apple
   support information, and a subset of the Apple Tech. Info. Library.

From the JLK Read Me:
=====================

The Japanese Language Kit is a combination of system and language resources that
enables you to create, display, and edit documents in Japanese on the Macintosh
and other computers using the Mac OS.

The floppy disk set and the CD-ROM both contain the software needed to install
the Japanese Language Kit. The CD-ROM includes demo applications you can use
with your Japanese Language Kit. (The samples are not full-scale programs, but
they give you an overview of each product's features and functionality.) Also,
look at the CD-ROM for updates to software you may already own.

Enhancements in this version of the Japanese Language Kit include System 7.5
and QuickDraw GX compatibility, a TrueType version of the Osaka font, an updated
input method, and system resources to allow WorldScript to run native on Power
Macintosh computers.

Current Japanese Language Kit version 1.0 and 1.1 Users
During installation, the Installer safeguards your system folder against data
loss by creating temporary files. These temporary files and your Japanese
Language Kit may require up to 41 MB of hard drive space for correct
installation. After installation the Japanese Language Kit will occupy less than
30 MB. (Size will vary depending on which fonts you choose to install.)

If you do not have sufficient space for installation, you can make more space
available by doing the following:
1. Remove unnecessary files or applications.
2. Custom remove the current language kit.

To custom remove the current language kit:
1. Insert Disk 1 of Japanese Language Kit v 1.1 or 1.0 in the floppy disk
drive.
2. Double-click on the Installer icon and immediately hold down the Option key.
(Hold down the Option key until you see the Remove button in the right hand
corner of the dialog box.)
3. Shift select all items displayed, then press the Remove button. (NOTE: If
the button says Install, press the Option key again change it back to Remove.)

Installation
Refer to the Macintosh Japanese Language Kit Installation and User's Guide for
installation and set up information.

If you have a Performa or PowerBook and receive a dialog box during installation
that refers you to this READ ME, you must remove the "Launcher Control Panel"
before installation.

To remove the Launcher, do the following:
1. Open the System Folder.

2. Open the Control Panels folder.
3. Select the Launcher and drag it to another folder.
4. Install the Japanese Language Kit.
5. Place the Launcher back into the Control Panels folder (inside the System Folder).

Prior to installing the Japanese Language Kit on the Arabic or Hebrew versions of the Mac OS, you may want to choose the left-to-right setting in the Text Control Panel for proper justification of Roman text during installation.

Printing
If you experience printing problems with the LaserWriter 8 printer driver, use the LaserWriter v7.2 printer driver.

To select the LaserWriter v. 7.2 printer driver do the following:
1. Open the Apple Menu and select the Chooser.
2. Click the LaserWriter icon.

Note: LaserWriter v7.2 is the version of LaserWriter that comes with System 7.5.

Helpful Hints
The Macintosh Japanese Input Method Guide (chapter 5) will show you how to create your own user dictionary to save frequently used Kanji characters and names.

To activate the Japanese input method open a Japanese Language Kit compatible application or a Japanese application.

Compatible Applications
The Japanese Language Kit includes a basic text processing application called SimpleText Japanese. Previous versions of the Japanese Language Kit included TeachText Japanese. All TeachText Japanese documents can be edited with SimpleText Japanese.

The Japanese Language Kit can be used with a variety of Japanese-localized applications. Most of these applications are available for purchase through specialized distributors and dealers outside of Japan. They include:
Act! for Macintosh J
Canvas J
ClarisImpact J
ClarisWorks J
Deltagraph Pro J
Director J
EGWord J
Fetch J
FileMaker J
FileMaker Pro J
FreeHand J
GreatWorks J
HyperCard J
Illustrator J

```
InControl J
Lotus 1-2-3 J
MacDraw Pro J
MacWord J
MacWrite II J
PageMaker J
Persuasion J
Photoshop J
Premiere J
QuarkXPress J
Shasta J
SoundEdit J
StatView J
SuperPaint J
TurboWriter J
UltraPaint J
WordPerfect J
```

The Japanese Language Kit can be used with many English or Roman character-based programs that employ the Apple WorldScript software technology. These programs include:

```
A.D.A.M Comprehensive
AllPage
AllScript
Ambassador English/Japanese
Logo Vista E to J
Logo Vista J to E
Nisus Writer
Shasta
TurboWriter
WinText
WordPerfect
WorldWrite
```

Note: The above lists are not intended to be comprehensive. Also, many English or Roman character-based applications that do not employ WorldScript software technology may provide limited functionality and allow input of Japanese characters, but may cause loss of data over time. Please check with the application vendor for more information about WorldScript support in their products.

Apple makes no warranties or representations regarding the quality or compatibility of third party products. Warranties, if any, relating to such third party products are between the software vendors and their customers.
