AppleCD Audio Player: Where Are CD-ROM Names Stored (6/95)

Article Created: 14 June 1995

TOPIC -----

I entered the names of all my audio CDs into the AppleCD Audio Player. When I loaded a CD that I had previously entered the track information, it was gone! When I check the others, they too were gone. What happened? Is there a file where this information is stored?

DISCUSSION -----

The AppleCD Audio Player will remember the names of Audio CDs and tracks between shutdowns. The names of CDs and tracks are stored in a file called CD Remote Programs in the Preferences Folder of your System Folder. If this file has been removed, the AppleCD Audio Player creates a new blank one. Your CDs will appear as Audio CD 1, Track 1, Track 2 and so on. In this case, you will need to replace the original file with a backup or re-type the information.

If you locate the original CD Remote Programs file which holds your CD titles, your titles will reappear when you drag it back into the Preferences Folder.
