## ARPLE CD: How To Perform Manual Install (11/95)

Article Created: 2 November 1995

TOPIC -----

I am experiencing difficulty with the installation of the new Apple Reference, Performance, & Learning Expert (ARPLE) CD, October '95 Provider Edition. Each time that I try to run the ARPLE II HD Installer, the installer provides a "unsuccessfully installed" message.

I have tried two different ARPLE CDs (both October), on three different computers (Macintosh Workgroup Server 8150, Quadra 840AV, Quadra 800 with PowerPC card all with system 7.5.1), with the same non-results.

DISCUSSION -----

You may be experiencing an installer issue where the Apple Media Tool preferences file is not being installed properly. You could try restarting with all of extensions off, except your CD-ROM extension, before attempting to run the installer or you could try a manual installation.

The following instructions describe how to perform a manual installation:

### Manual Installation Instructions

-----

If you have difficulty using the ARPLE Installer, follow the directions below for manual installation.

#### Step 1

-----

Create a folder named, ARPLE II Internal Folder on your hard drive.

#### Step 2

-----

Open the folder on the CD named, ARPLE II Folder and copy all of the files except PMedia and Preferences to the new folder on your hard drive.

#### Step 3

-----

In the ARPLE II Folder on the CD, open the folder named, Preferences and drag the complete folder named ARPLE to the preferences folder in your System Folder.

Step 4

-----

To launch the ARPLE interface from your hard drive open the ARPLE II Internal folder and double click on the ARPLE II application icon.
