SimpleText and CAP Incompatible (6/95)

Article Created: 19 June 1995

TOPIC ---

We have several Macintosh computers with System 7.5, and a Hewlett Packard (HP)
9000 with HP-UX 9.04 running the Columbia AppleTalk Program (CAP) 6.0 pl 192,
and UAR (Unix AppleTalk Router) 1.0 as a file server. With SimpleText open if I
save a file to a CAP volume (a volume on the Unix file server) the save appears
OK (no error reported), but the file does not get saved. It's not visible from
either a Macintosh on the network or from within UNIX.

We have tried a variety of versions of SimpleText -- those that come with Mac OS
7.1, 7.5 (SimpleText 1.1.1), and 7.5.1 (SimpleText 1.2). They all exhibit the
same problem.

The only application that seems to have this problem is SimpleText. ClarisWorks
saves on CAP volumes, and if we save a file from SimpleText onto the local hard
drive, then use the Finder to copy it to the CAP volume, that works too. Is
there an incompatibility problem between SimpleText and CAP?

DISCUSSION ---

According to the symptoms you describe, it appears a compatibility problem
exists between CAP and SimpleText. We have reported this to engineering for
evaluation. We have no known date for a solution, or if a solution will be
implemented.
