CADAM Software on Macintosh

This article last reviewed: 29 August 1988

For those of you running CADAM software on a Spectrographics workstation and storing files on an Amdahl Mainframe, here is some information to keep in mind:

While CADAM does output files in an IGES format when using the Mainframe version of the software, it does NOT output IGES format when running the mini or micro version of the software. To transfer a drawing into the Macintosh environment you need a utility like CadMover. CadMover converts IGES file format to other formats including those used by the Macintosh. Its capabilities include:

IGES -> MiniCad
IGES -> DXF
IGES -> MacDraw
IGES -> PICT
IGES -> MSC/pal
