AFE 1.4: 8•24 GC Acceleration Problem

Article Created: 13 August 1991
Article Last Reviewed: 15 June 1992
Article Last Updated: 15 June 1992

TOPIC -----

Apple File Exchange will not make a clean transfer of data to IBM format when the Macintosh Display Card 8•24 GC's acceleration is on. AFE works okay when the accelerator is turned off.

DISCUSSION -----

This is a known issue with version 1.4 of AFE. The problem occurs with AFE when the Macintosh Display Card 8•24 GC graphic acceleration is turned on and may cause the system to hang, especially when formatting or erasing disks.

The problem does not exist with version 7.0 of AFE. However, AFE 7.0 has only been tested with System 7 and the 7.0.1 version of the 8•24 GC software. The current solution for System 6 users is to turn off graphics acceleration when using disks with AFE 1.4.
