MacCheck: Logic Board Failure Detected (8/93)

Article Created: 19 August 1993

TOPIC --

MacCheck just detected a logic board failure on my Macintosh.   What
should I do?

DISCUSSION ---

If MacCheck detects a logic board failure:

1) Shut down your Macintosh by selecting Shut Down from the Finder's Special
   menu.

2) Hold down the Shift key while restarting your Macintosh. This lets the
   computer start up without loading any system extensions.

3) Run MacCheck again. If MacCheck still detects a logic board error, contact
   the Apple Assistance Center or your Authorized Apple Service Provider.
