## Font/DA Mover: Pre-3.6 Versions Are Not MultiFinder Compatible

Article Created: 87 December 1987  
Article Last Reviewed: 2 February 1991  
Article Last Updated: 2 February 1991

### TOPIC -----

My copy of Font/DA Mover 3.6 works fine when I run it under the Finder, but I have problems when MultiFinder is on.

### DISCUSSION -----

Font/DA Mover 3.6 (included with System Tools 5.0) is compatible with MultiFinder. However, the MultiFinder "User's Guide" recommends turning MultiFinder off when your application or desk accessory isn't behaving properly under Font/DA Mover versions earlier than 3.6. The manual specifically recommends turning MultiFinder off when you install or remove fonts or desk accessories. Note that the warning applies only to versions of Font/DA Mover earlier than 3.6.

We recommend you upgrade to a 6.0.x release of Macintosh system software that is compatible with your computer. This would include the current version of the Font/DA Mover. If you want to upgrade to System 7, you won't need Font/DA Mover at all.

See the Tech Info Library for additional guidelines on using MultiFinder and FontDA Mover.
