## LaserWriter Font Utility: It Has Four Basic Functions

Article Created: 2 March 1988  
Article Last Reviewed: 5 November 1991  
Article Last Updated: 18 October 1988

### TOPIC -----

This article describes the functions of the LaserWriter Font Utility.

### DISCUSSION -----

The LaserWriter Font Utility Application located on the LaserWriter II installation disk provides four basic functions:

- Initialization of disk devices attached to the LaserWriter IIIntx. Initialization allots 20 percent of total disk space to font storage and 80 percent to font-caching.

NOTE: The following functions can be used with any AppleTalk LaserWriter.

- Display all available fonts -- built-in ROM fonts, downloaded RAM fonts, downloaded disk device fonts. You are given the option of deleting fonts which have been downloaded to a disk device.
- Download fonts - When you download a font (AND you have a hard disk attached,) you can choose to download it either to the disk or to RAM. Downloading it to the disk stores it there permanently (or until you remove it.) Those fonts downloaded to RAM remain there until the LaserWriter is powered-down.
- Print Catalog of available fonts (same as display fonts) and their associated sample text.
