AutoCad-to-VersaCad Translators Update

This article last reviewed: 18 May 1988

People looking for ways to read AutoCAD and/or ComputerVision files into
the Macintosh can use VersaCAD and VersaLINK, a file translation program
that ships with VersaCAD.

VersaLINK translates at least two types of AutoCAD files into a format
VersaCAD can use: Initial Graphics Exchange Specifications (IGES) and
Document X-fer File (DXF).

ComputerVision supports the IGES rev 3.0 file format. Therefore, you
should be able to translate the files using VersaLINK or other tools,
like translators and CAD applications. These are well documented on
AppleLink in the Tech Info Library. Search on a combination of IGES, CAD, and
AutoCAD.
