Disk First Aid and MFS Volumes

Article Created: 11 March 1991

TOPIC --

I'm trying to run Disk First Aid version 1.4.2 from a bootable floppy. When
I run the program to analyze my hard disk it says "This is not an HFS disk"
(and I think it is).

I'm doing this because Symantec said to run Disk First Aid before trying
to defragment and optimize my hard disk before running "Disk TuneUp" on SUM
II.

DISCUSSION ---

We have seen this error only when trying to run Disk First Aid on an
MFS-formatted volume. You can verify that the volume is HFS by looking at
the left side of the two lines below the volume information when your disk
window is open. There will be a pixel on the left side indicating that the
volume is an HFS volume. The absence of a pixel means you have an MFS volume
or you are running System 7.

If the volume is HFS, use a more current version of Disk First Aid--version
1.4.3 or above.
