TOPIC -----

What is SPAudit?

DISCUSSION -----

SPAudit is an application program that inventories all other applications on your hard drive, so that you can verify:

- that you have only one copy of each, and
- that you have legally purchased all applications on your system.

SPAudit is available in both Macintosh and DOS versions. It is included in the SPA self-audit kit, available from Software Publishers Association.

On AppleLink, you can find contact information for the various vendors by clicking the Library Index button to view the folder structure in the Tech Info Library. An alphabetic listing of vendors is in the Third Party Company Directory folder.
