CPU Energy Saver & Geoport: Wake up Possible? (4/94)

Article Created: 20 Apr 1994

TOPIC -----

I have a Power Macintosh 8100/80AV running the CPU Energy Saver Cdev with a GeoPort™ Telecom Adapter connected. Can I set my Power Macintosh to wake up from CPU Energy Saver when a phone call comes through on my GeoPort™ Telecom Adapter?

DISCUSSION -----

The answer is NO. Here's why:

The Power Macintosh needs to be ON to be able to answer the phone using a GeoPort™ Telecom Adapter and Express Modem Software. The CPU Energy Saver software shuts down your system at a time you specify. With your Macintosh shut down your GeoPort™ Telecom Adapter cannot be utilized.

The CPU Energy Saver software does have a feature called "Do not shut down if a serial port is being used". If either port is active (i.e. Geoport waiting for a phone call), the system will not shut down. You can disable this feature by unchecking this option.
