Macintosh: WDEF Symptoms

Article Created: 22 April 1991

Article Last Reviewed:

Article Last Updated:

TOPIC -----

I'm having the following problems under System Software 6.0.7:

- Repeated restarts when doing things (moving folders, files, and so on) on the desktop
- Flashing warning box with no text in the box
- System bomb with the error message "Address Error"

DISCUSSION -----

There aren't any known problems with System 6.0.7, and especially none like that. We suspect that you're dealing with either a defective logic board or possibly a virus. I would suggest checking for the virus first, as the symptoms are similar to WDEF's infection of a Macintosh IIfx.
