AppleShare PrintServer: Enabling Banner Page w/ System 7 10/94

Article Created: 20 August 1991
Article Reviewed/Updated: 21 October 1994

TOPIC ---

This file contains a patched resource for version 2.0.1 of the AppleShare Print
Server. When installed into the Print Server software using ResEdit or a
similar utility, it allows banner pages with 7.0 print drivers - something that
otherwise hangs the Print Server.

DISCUSSION --

To install, follow these steps:

1) Make a copy of the "AShare Prnt Srv" program that you want to modify.
   Don't use the original.

2) From within ResEdit, open the "Special BANP Resource for 7.0" file.

3) Select the BANP icon from the opened window, and then Copy from the Edit
   menu. Close the file.

4) Select Open... from ResEdit's file menu to open the AShare Prnt Srv copy
   you made in step 1.

5) Select Paste from the file menu, and confirm that you want to replace
   the version that already exists.

6) Quit ResEdit, confirming that you want to save changes.

The modified version should now work properly with the banner page option
enabled.

This patch has not undergone the extensive testing that accompanies
released products, and therefore must be provided as an unofficial and
unsupported patch. It appears to solve the problem of hanging banner
pages, but use it at your own risk.

The binary attachment (ex. utility/application/file/extension) mentioned in this
article is enclosed only in the on-line AppleLink version of the article. If you
are accessing this article outside of AppleLink, and you want to download the
attachment:

1) In AppleLink, open the Tech Info Library.

2) Search for this article.

3) Open the article and click "Download".
