Apple High-Resolution RGB Monitor: Keystoning Distortion

Article Created: 13 August 1991

TOPIC -----

My Apple High-Resolution RGB Monitor is square on its left and right edge, but the right side is taller than the left side. Is there any way to adjust for "keystoning"?

DISCUSSION -----

Keystoning within 2.5mm is within specification for that monitor. If the distortion is greater than 2.5mm, changing a video D board may solve the problem.

We have seen the problem actually get slightly worse by replacing modules, so if it is barely noticeable, you may want to learn to adjust to it rather than risk making it worse.
