AppleShare 3.0 Print Server: RAM Allocation (2/95)

Article Created: 30 January 1992
Article Reviewed/Updated: 02 February 1995

TOPIC ---

Does the AppleShare 3.0 Printer Server perform faster or more efficiently with
additional RAM?

DISCUSSION --

Increasing the server's physical RAM beyond what is needed to run the program
will not increase performance.

Increasing the memory allocated to the Print Server application does not
increase performance either, because the Print Server uses a fixed number of
buffers and can't make use of the additional memory.
