TOPIC -----

A customer brought in an Apple 12-in Color RGB monitor from Israel, where it ran on 220V. Can this monitor be used here in the United States?

DISCUSSION -----

Based on your description, your customer has the international version of the 12-in. RGB main board. The international version can be plugged directly into a domestic or international outlet and still operate normally. Unlike the purely domestic version, the monitor self-configures itself depending on the supplied voltage.
