TOPIC ---

Can I use program linking on an Apple Remote Access (ARA) MultiPort Server? What
application should I use?

DISCUSSION --

Yes, either AppleShare Admin 3.x, or 4.x can be used to enable program linking
although neither one has been tested or supported for this purpose.

In order to run AppleShare Admin 4.x you will need an AppleShare 4.x serial
number, and to obtain one, you must purchase AppleShare 4.x.

If cost is an issue, you could use AppleShare Admin 3.x to manage the program
linking on an ARA MultiPort Server. Since Admin 3.x does not have serial number
protection, this offers a solution that will let you take advantage of program
linking on a ARA MultiPort server without having to have an AppleShare serial
number. (Note for Apple support providers: It is OK to give a customer
AppleShare Admin 3.x ONLY, do not give them the other files needed to run
AppleShare.)

NOTE: Neither AppleShare Admin 4.x, or AppleShare Admin 3.x is officially
supported so you use it at your own risk. The risk, however, should be minimal.
