TOPIC ---

1) On the IBM host we have an ACC box that provides a TCP/IP Ethernet
   connection to the mainframe. Is there some way we can get from a
   Macintosh on Ethernet using DAL to access DB2 data on the host (assuming
   we'd be running DAL/VTAM on the host) with this connection? Or are we
   limited to the 3270 datastream API support (we have Tri-Data Netway
   gateways for host access)?

2) Does DAL support the latest Tri-Data Netway software (Netway 3270 A/G
   1.0)?

DISCUSSION --

1) You must access the DB2 database via the Netway connection. DAL
   supports TCP/IP to VM hosts only.

2) Yes, DAL supports Netway 3270 A/G 1.0.
