Duo Dock: Macintosh LC VRAM Upgrade Not Recommended

Article Created: November 20, 1992

* RESTRICTED: Apple Internal and Support Providers Only *
Not For General Public Release

TOPIC -----

Are the VRAM upgrade kits for the Duo Dock the same as those for the Macintosh LC? And if the SIMMs are the same, why are there two different part numbers and prices?

Can I use a Macintosh LC 512K VRAM SIMM in the Duo Dock?

DISCUSSION -----

The November 16, 1992, Suggested Retail Price List shows the following:

Macintosh Displays, Cards, & Video Expansion (speed)

M0517LL/A - Macintosh LC 512K VRAM SIMM 159.00 (100ns)

Macintosh Duo Dock Accessories

M1311LL/A - Macintosh 512K VRAM Expansion Kit 99.00 (80ns)

Yes, M1311LL/A is less expensive, faster, and can be used in the Macintosh Duo Dock, Macintosh LC, and Macintosh LC II.

Installing M0517LL/A in a Macintosh Duo Dock is neither supported nor recommended.
