LaserWriter Select: Jam LED Blinking w/No Paper Jammed (9/93)

Article Created: 16 September 1993

TOPIC ---

I have two LaserWriter Select printers, straight out of the box, that
have the Paper Jam LED blinking although no paper is jammed.
Reseating the toner cartridge has no effect.

DISCUSSION ---

The blinking jam LED is due to a misaligned spring on the Delivery
Sensor Actuator, located on the fuser.

Push the actuator away from the sensor. The actuator should swing
freely and come back to the sensor. If it doesn't, that means the
spring on the actuator is misaligned. Due to the difficulty in getting
to the spring, it is suggested to exchange the whole fuser.
