TOPIC --

My LaserWriter Pro 810 I/O controller has two sets of jumpers labeled W4
and W9 each with pins labeled A, B, and C. What are the default positions for
the jumpers?

DISCUSSION ---

On the LaserWriter Pro 810 I/O controller board there are two sets of
jumpers with A, B, and C configurations. Both jumpers are used by the vendor for
printer configurations that include the parallel option. Apple sells the
LaserWriter Pro 810 with the Ethernet option instead of the parallel option
therefore these jumpers have no effect on the Apple version of this printer.

Although this information isn't valid for the LaserWriter Pro 810 the
default positions are as follows:

```
Jumper W4
---------
A-B jumpered      Centronics Strobe low (default position)
B-C jumpered      Centronics Strobe high

Jumper W9
---------
A-B jumpered      Centronics IPRIME signal enabled
B-C jumpered      Centronics IPRIME signal disabled (default)
```
