TOPIC -----

My customer has a US/Japan 110V LaserWriter Pro 630 that she wants to convert for use with 220V so that it can be used in Europe. What parts are required to perform this conversion?

DISCUSSION -----

Converting the LaserWriter Pro 600 or 630 from 220V to 110V requires replacing the power supply and fuser assembly with versions designed for use with 110V. The service part numbers are:

661-0803 Power supply (220/240) 661-0806 Fuser Assembly (220/240)

In order to prevent servicing problems in the future it is recommended that a label be placed near the product label indicating that a voltage conversion was made. Apple does not formally support voltage conversions of LaserWriter Pro 600/630 printers. Each LaserWriter that is shipped to a particular country is guaranteed to meet the agency requirements for that particular country. LaserWriters that are shipped internationally and converted for use in another country may not contain the proper agency approvals.
