LaserWriter Driver 8.3: Errors with Pre-Release Version (7/95)

Article Created: 24 July 1995

TOPIC ---

I am using a pre-release version of the LaserWriter 8.3 driver, which was included with my Color LaserWriter 12/600 PS, and I am getting several printing related errors, such as:

• No Desktop PrintMonitor is installed but desktop printing works.

• GX helper is an option for installation, but the Color LaserWriter does not support Quickdraw GX.

• "Apple Color Enhancement or Color Matching Hardware Assist" appear as Options in the Print Dialogue box, but these should not be used.

• Installation begins on computers with System 7.1 even though system software version 7.1.1 is necessary. The install often fails.

• Cannot increase the memory to the Desktop printer icon.

DISCUSSION --

These errors are caused by the use of a pre-release version of the LaserWriter 8.3 driver. To avoid these errors, use the final version of the LaserWriter 8.3 driver.
