TOPIC --

After recently upgrading several Macintosh IIfx computers, I'm suddenly
experiencing weird lock-ups and crashes with all of them. I've removed all
non-Apple INITs, done virus checking, and re-installed the Systems.

DISCUSSION ---

Make sure you aren't using NEC brand RAM. There is a known problem with this
brand and you'll need to get the RAM replaced.

In general, if you have third-party RAM, try using Apple RAM to see if it fixes
your problems.
