TOPIC ---

We're developing an SQL-NET update for MacTCP 1.1, and don't want to re-invent the wheel for Token Ring support. What will we need to get TCP/IP services over Token Ring on a Macintosh?

DISCUSSION --

The "MacTCP Token Ring Extension" is an extension to the MacTCP driver that provides Token Ring support. It works with MacTCP 1.1 and future versions. System 6.0.5 or later and a Token Ring Card (that supports the .TOKN driver) are required.
