Not For General Public Release

TOPIC -----

I know that the Macintosh Display Card 8•24 GC control panel is supposed to speed up all NuBus-based video, but why is it slowing down on-board video?

DISCUSSION -----

The System 7.0 compatible Macintosh Display Card 8•24 GC Control Panel disables cache intermittently on 68040 systems, causing these systems to run slower. Apple is aware of the problem and is investigating possible solutions.
