Macintosh Accelerators: Utilization of FPUs (3/93)

Article Created: March 5, 1993

* RESTRICTED: Apple Internal and Support Providers Only *
Not For General Public Release

TOPIC -----

Is it true that on a system with an FPU and an FPU-less accelerator card:

- a Macintosh IIci uses the on-board FPU, but
- a Performa 600 or Macintosh IIVx does not use the on-board FPU?

DISCUSSION -----

Yes: accelerators cannot utilize the FPU located on the Macintosh IIVx or Perform 600 (optional) logic board when the accelerator is active.

The Macintosh IIci is the only Macintosh model whose accelerators can utilize the FPU on the logic board.
