Not For General Public Release

TOPIC -----

Can you provide the dimensions of the factory adjusted active video display area for the Apple Multiple Scan 15 Display?

DISCUSSION -----

According to the factory specification, the Apple Multiple Scan 15 display has an active raster size of 260 mm x 195 mm (10.24" x 7.67"). This is somewhat confusing to end users because the actual viewable diagonal measurement is approximately 12.8 inches.

The actual CRT physical diagonal measurement is 15". However, some of this area is not usable because the CRT face is covered by the plastic bezel and also because the Macintosh desktop requires a black border around its perimeter.
