MacTest Pro 1.0 and AV Card ROM Version 1.0GM2 Problem (10/94)

TOPIC -----

Using MacTest Pro, "Power Macintosh CPU Test Vol.1 Version 1.0", on AV video cards with ROM version 1.0GM2, always fail the test. However an AV card with ROM version 1.0fe2 showed no test failure. Do I need the updated version of MacTest Pro, or is something wrong with the AV cards with ROM version 1.0GM2? These AV cards (ROM version 1.0GM2) seem to work fine with Power Macintosh computers.

DISCUSSION -----

We are aware of this situation. The AV video cards with the 1.0GM2 ROMs will all fail this test even though there is nothing wrong with the card. This occurs because the ROM was changed after the test software was created and shipped. Diagnostic engineering is currently working on an upgraded version of this test that will provide a true test of the AV cards with the 1.0GM2 ROMs.
