PATHWORKS: Volume Alias Doesn't Use VMS UAM Log-On Method

Article Created: 19 June 1992

    * RESTRICTED: Apple Internal and Support Providers Only *
                Not For General Public Release

TOPIC ---

In PATHWORKS, using the VMS UAM log-on method, the password can be up
to 31 characters. However, if you create an alias for the volume,
then double-click on the alias to mount the volume later, VAXshare doesn't
use the VMS UAM log-on method anymore, and allows only an 8-character
password. This makes System 7 alias unusable for volumes with passwords
longer than 8 characters.

DISCUSSION --

Thanks for bringing this to our attention. We reproduced the problem and
will report it to Digital. Digital has taken over all PATHWORKS
development except for MacX, MacTCP, and DAL. They would like all
PATHWORKS problems reported directly to their support centers.
