TOPIC ---

This article describes a power supply test on a PowerBook Duo Dock to help
determine if it's still functional.

DISCUSSION --

If a PowerBook Duo will not power up in a Duo Dock 1 or 2, the following are
measurements the technician can take off the power supply to logic board cable
and determine if the power supply is functional.

  Pin 5 (Yellow Wire)   5V +/- .5V
  Pin 7 (Blue Wire)   20V +/- .5V

If the above voltages are present, the power supply should be OK.
