PowerBook 500 series: MacTest Pro RAM Test (12/94)

Article Created: 08 December 1994

* RESTRICTED: Apple Internal and Support Providers Only *
Not For General Public Release

TOPIC -----

When I boot MacTest Pro on any PowerBook 500 series computer, the RAM test and Destructive logic board tests are grayed out. What's wrong?

DISCUSSION -----

The MacTest Pro software will disable the RAM and Destructive logic board tests if AppleTalk is active.

To enable the tests, follow this procedure:

- 1) Zap the PRAM in the PowerBook.
- 2) Boot from the internal hard drive or Disk Tools disk with extensions disabled.
- 3) Restart the PowerBook and boot from the appropriate MacTest Pro disk.

If these procedures are followed, the RAM and Destructive logic board tests will be available for use.
