TOPIC -----

How can I distinguish between a Power Macintosh 7100/66 and Power Macintosh 7100/80 logic board?

DISCUSSION -----

There are several ways to distinguish the logic board of a Power Macintosh 7100/66 from a 7100/80:

### 1. Serial number

- The last 3 characters of the 7100/66 Logic boards serial number are 2PS.
- The last 3 characters of the 7100/80 Logic boards serial number are 47N.

### 2. Oscillator speed

Locate oscillator G5 approximately two inches to the left of the power supply connector.

- If G5 is 33 MHz, the logic board is for a 7100/66.
- If G5 is 40 MHz, the logic board is for a 7100/80.

### 3. Sticker on the logic board

There may be a sticker on the logic board indicating 66 or 80 MHz.
