TOPIC -----

There are two different part numbers for 2 GB hard drives for Power Macintosh 8500 series computers, 661-1076 and 661-0180. The 661-1076 drive costs more than the 661-0180, but I do not see any other difference between them. What is the difference in the drives?

DISCUSSION -----

The 661-1076 is a is a single segmented cache drive designed for better video capture performance by improving the video transfer rates. This drive (661-1076) was offered as a special configuration.
