RasterOps 264 Video Card: CloseView and RAM Allocation

Article Created: 31 July 1991

TOPIC -----

When I have my RasterOps 264 video card in 24-bit mode my system jumps in RAM allocation by one megabyte (according to "About this Macintosh"). Why?

DISCUSSION -----

When the RasterOps 264 card is in 24-bit mode, the system takes 1MB of memory if the CloseView Control Panel is installed. The only known solution for this is to remove CloseView from the System Folder. This problem occurs only in 24-bit mode; all other modes work fine with CloseView.
