TOPIC -----

What bugs does System 6.0.7 fix?

DISCUSSION -----

System 6.0.7 fixes two System 6.0.6 bugs:

- When asked about the status of the AppleTalk driver, Gestalt would return an indication that it was not installed, even though it was.
- System Software 6.0.6 had timing errors with the Apple Keyboard II which were accentuated on the Macintosh LC and Macintosh IIsx.

Both of these problems have been fixed in System 6.0.7.
