Service Source CD: Script Error and Solution (11/94)

Article Created: 21 April 1991
Article Reviewed/Updated: 07 November 1994

TOPIC ---

When using the April 1991 release of the Service Source CD-ROM, I get an
error message saying "There is no card field named Version."

DISCUSSION --

Service Source is a compact disc (CD-ROM) version of Apple's Service Technical
Procedures Manuals. It is available to all service providers who are part of
Apple's Service Subscription program.

The Problem

If you have started up a previous version of Service Source, a stack called
SSROOT was created and stored in the same folder on your hard disk where
HyperCard 2.0 and the Home stack reside. A script, which is used to determine
whether the SSROOT stack is the latest version, has a flaw and will not
automatically find and replace the old version of SSROOT. The error message you
will receive is "There is no card field named Version."

The Solution

To force the Service Source Startup stack to install a new SSROOT stack, quit
HyperCard and drag the old SSROOT stack from your hard disk into the trash.
