System 7: How To Fix SmartArt DA System Crash Problems

Article Created: 19 May 1992

TOPIC ---

I upgraded my Macintosh to System 7 and tried to use SmartArt, a DTP tool
containing modules with specific features/functions. When I try to print,
the system crashes with a generic failure message or freezes with no cursor
response.

DISCUSSION --

You can correct this problem by moving the printer driver and PrintMonitor
to the System Folder and placing aliases in the Extensions folder. Then
place the SmartArt DA for each module in the Apple Menus Items folder.
