## System 7: Upgrading System 6, Applications on Desktop Disappear

Article Created: 7 January 1993

TOPIC -----

I've been using System 6 on my Macintosh and putting my applications on the Desktop. After I installed System 7 and rebuilt the Desktop, these applications disappeared. They appeared again in their correct place when I opened the hard disk icon. But now when I try to open a document created by any of these applications, I get an error message that says, "The application cannot be found." What's happening?

DISCUSSION -----

The fix is to move the applications to the hard disk window, then move it back to the Desktop. This seems to "force" the Finder to update the Desktop correctly.
