SNA•ps 3270: IND&FILE Mapped To INDOFILE (5/93)

Article Created: 10 May 1993

TOPIC -----

I'm interested in the SNA•ps products for 3270/3287 emulation and file transfer. The problem is I use INDOFILE instead of IND\$FILE as the file transfer utility (in TSO). The SNA•ps 3270 application uses the IND&FILE utility.

Is it possible to change or map it to INDOFILE?

DISCUSSION -----

In SNA•ps 3270 emulation, the IND\$FILE name is not available to the end user to change (like DCA's MacMainFrame). Each name is determined by the language selected to be used by the SNA•ps 3270 emulator. The only way to change the file transfer utility name from the IBM-supplied default, is to use ResEdit and modify the HLNT resource in the SNA•ps 3270 product. The resource offers a list of default names and the host language. We have opened this resource and it appears the format is IND\$FILE followed by the host language. There are some cryptic characters between these entries which are of no concern to you in the editing process. You have to scroll down to the appropriate host language, and replace the \$ symbol with an O. That will change the default name sent to start the file transfer.
