TOPIC -----

I find there's an incompatibility between AIR (Apple Internet Router) 3.0 and ATM (Adobe Type Manager) 3.0 running on my Centris 650 or my Quadra 800 running 7.1.

The computer hangs at startup when ATM is installed and turned on (in the Control Panel). I was able to strip the computer of all Extensions, and pin point ATM as the problem. If I turn ATM off in the control panel, and start up the AIR, and then turn on ATM, it works, but that's not a solution.

DISCUSSION -----

From the computers you reference, Centris 650 and Quadra 800, your ATM 3.0 problem is not with AIR, but with Macintosh computers that use a System Enabler. There are two workaround solutions you can use:

- Contact Adobe for an upgrade to ATM 3.6
- Use the Connectix Enabler Patch

To locate a vendor's address and phone number, use the vendor's name as a search string.
