TOPIC --

How do I get a single element out of the "System Update Disk v 3.0 Archive" on
Disk 1 of System Update Disk v 3.0?

DISCUSSION ---

With Installer 4.0 archive files such as System Update Disk v 3.0 Archive, you
have to run the Installer and go to Custom Install to extract specific pieces of
the archive.

NOTE: With Installer 4.0, when you expand files from an archive, the creation
date of the files are set to the creation date of the archive, and the
modification date is set to the current time when you are installing.   The
version numbers of the individual files are correct.

So if you are used to checking creation and modification dates in addition to
the version numbers, this may be confusing.

The Installer will be updated to avoid this problem.
