TOPIC ---

We are seeing cases where older Daystar accelerators are having problems with the System 7.5 Installer. Is there any additional information available on this problem?

DISCUSSION --

DayStar Digital has provided the following information:

1) Connectix MODE 32 for 7.5 is required for users installing 7.5 on:
   Macintosh II, IIx, IIcx, and SE/30. It must be installed previous to
   installing System 7.5 or file corruption will occur.

2) DayStar strongly recommends a "clean install" of System 7.5 versus an
   Easy Install on top of an existing system.

3) Using version 4.0.1 of the ROMs and version 2.2 of QuadControl control
   panel will provide the best results.

4) Daystar is aware of the following problems:

   • Virtual memory does not work.
   • The QuadControl control panel crashes in 24 bit mode.
   • Maxima 3.0 and CloseView cause problems in some machines.

DayStar Engineering is working on a fix to these problems which may take the form of a new QuadControl, ROM or both. No further information is available at this time.
