Winnie the Pooh Virus: Unofficial Notice (6/94)

Article Created: 3 Jun 1994

* RESTRICTED: Apple Internal and Support Providers Only *
Not For General Public Release

TOPIC -----

There is an older virus that is resurfacing specifically with the High Volume computers. When a disk is inserted a dialog box pops up with an icon of Winnie the Pooh and the message "This disk is totally ----- up. Fix it?" and then the buttons "Yea" or "No Way"

The second possible message is "This disk has been erased" there is an "OK" button that when clicked gives the message "Haha ---head!"

DISCUSSION -----

A new version of SAM was not able to fix the virus, it did however note that there was a problem. Reformatting the hard drive and disposing of all floppies that have been inserted into the machine since the virus appeared appears to be the only solution. The source of the virus is unknown.
